Web-based Database – Part II

Implement the following on csx:
1) Create all the relations or tables you identified in part I
2) Add data to the table
3) Retrieve data from the table using a simple query
4) Update data in the table
5) Delete Data in the table
6) Select and view a single table
7) Delete or remove a table

Using

      i) SQL queries entered directly on csx (using the command prompt for example).

     ii) A browser to enter queries and data as well as display the results of the query

Deliverables:
Submit your SQL code and any other code with comments on D2L

Deadline: Friday, March 18
